

Train 'n Trade: Foundations of Parameter Markets

Tzu-Heng Huang, Harit Vishwakarma, Frederic Sala

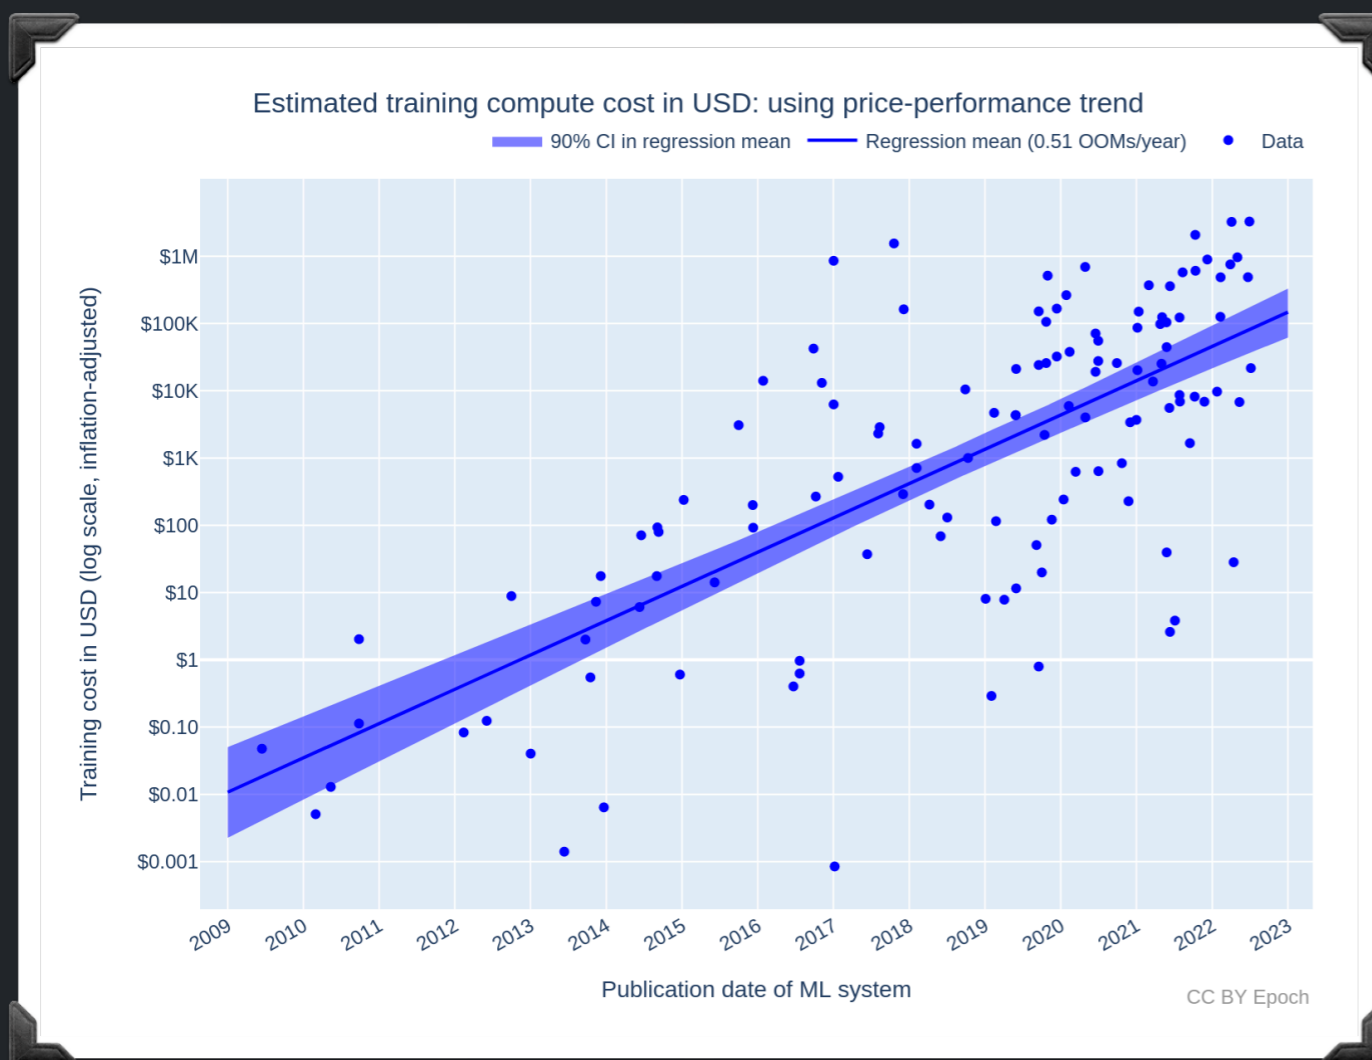

The Cost of Training

- ✦ Costs to build powerful ML models have increased enormously.

The Cost of Training

- * Costs to build powerful ML models have increased enormously.
- * Training a T5 model takes above **\$1.3 million** for a single run. The entire project is estimated about **\$10 million**.

In the Real-world

- * In the manufactory, products are broken in parts to be exchanged, re-used, and traded.

In the Real-world

- * In the manufactory, products are broken in parts to be exchanged, re-used, and traded.
- * Companies leverage the expertise of others so that production costs can be lowered, even when competing.

In the Real-world

- * In the manufactory, products are broken in parts to be exchanged, re-used, and traded.
- * Companies leverage the expertise of others so that production costs can be lowered, even when competing.
- * ***"Is it possible to build a trading marketplace to buy and sell parameters in machine learning models?"***

Parameter Markets

- * Buyers don't need to train-from-scratch anymore. They are able to purchase parameter sets directly and leverage the expertise from others.

Parameter Markets

- * Buyers don't need to train-from-scratch anymore. They are able to purchase parameter sets directly and leverage the expertise from others.
- * Sellers (i.e., model owners) are able to monetize parameters as a second profit center.

Fundamental Questions

Fundamental Questions

- * How should agents (users in the market) decide to perform transactions?

Fundamental Questions

- * How should agents (users in the market) decide to perform transactions?
- * What kind of rewards may agents gain?

Fundamental Questions

- * How should agents (users in the market) decide to perform transactions?
- * What kind of rewards may agents gain?
- * How to monetize model parameters in a competitive market?

Fundamental Questions

- * How should agents (users in the market) decide to perform transactions?
- * What kind of rewards may agents gain?
- * How to monetize model parameters in a competitive market?
- * We answer these questions, study fundamental infrastructures, and prove them in this work!

Empirical Results

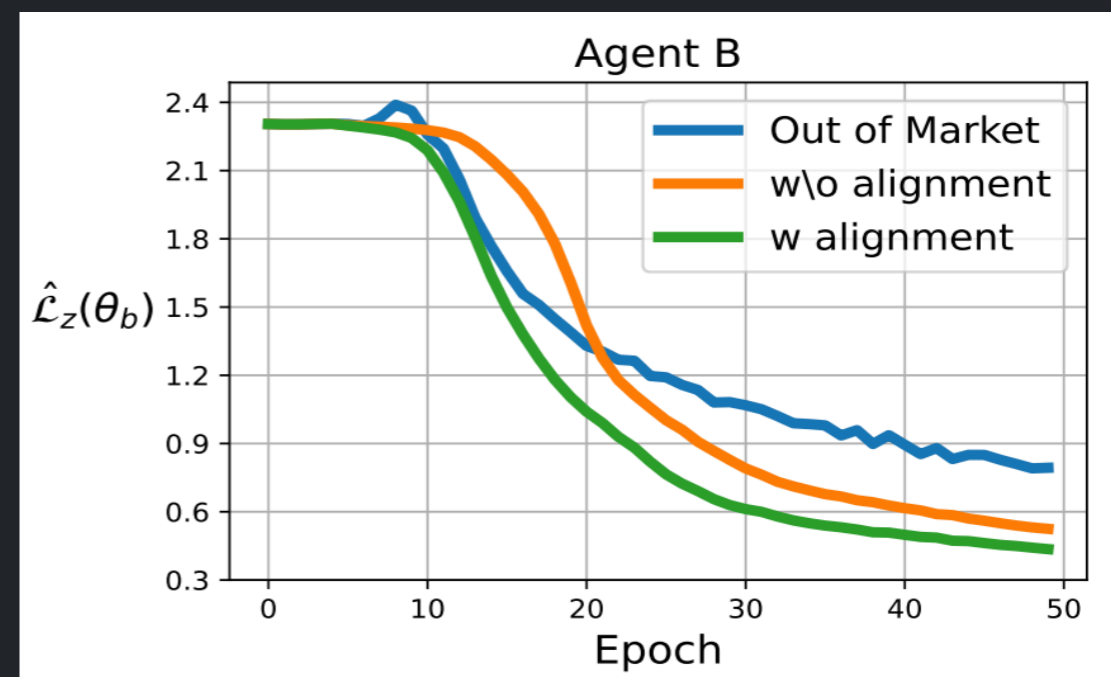

Empirical Results

- * Trading in the markets results in performance improvements.

Empirical Results

- * Trading in the markets results in performance improvements.
- * Improvements exist even when trading **subsets of parameter**.

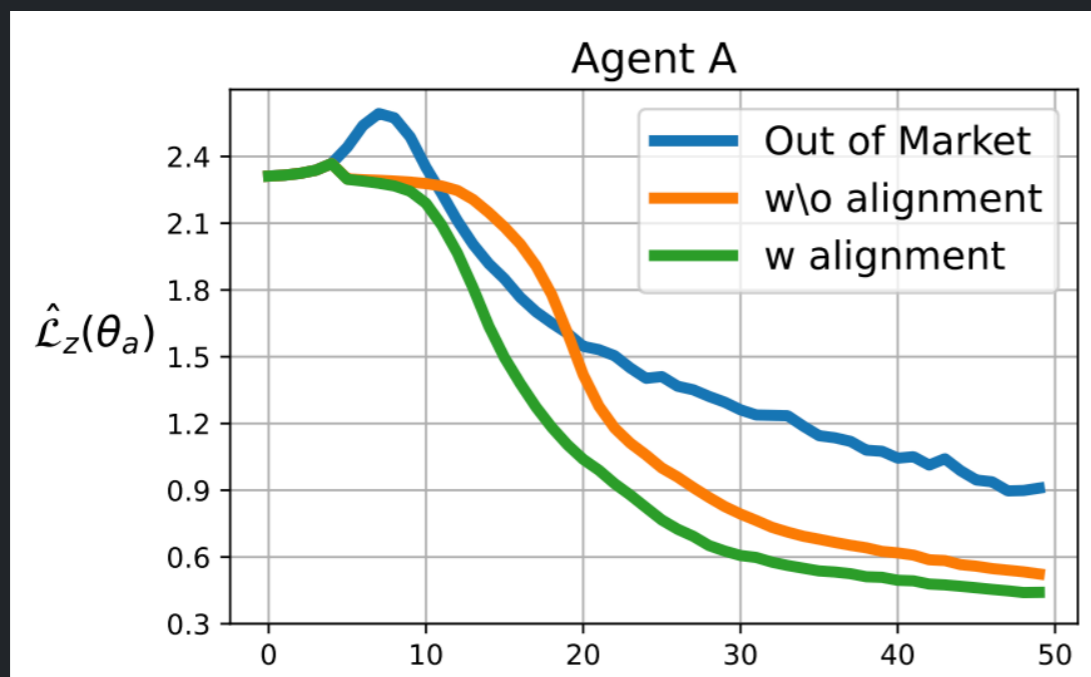

Empirical Results

- * Trading in the markets results in performance improvements.
- * Improvements exist even when trading **subsets of parameter**.
- * Improvements exist even when agents are trading **different models for different tasks**.

Empirical Results

- * Trading in the markets results in performance improvements.
- * Improvements exist even when trading **subsets of parameter**.
- * Improvements exist even when agents are trading **different models for different tasks**.
- * Pricing mechanism is viable in competitive setting.

- * ***"Is it possible to build a trading marketplace to buy and sell parameters in machine learning models?"***

- * ***"Is it possible to build a trading marketplace to buy and sell parameters in machine learning models?" Yes!***
- * ***We study foundations of parameter markets and demonstrate its viability under several practical scenarios.***
